

Pallet manufacturing and resawing

Pallet re-sawing is a very demanding application as it puts great stress on blades. Munkfors bandsaw blades tolerate tough conditions to give cost-effective manufacturing. In addition, our products are no. 1 in the world when talking quality consistency which means blades that delivers great results – every day.

Pallets are made of different species of wood. Even hardwood species like oak, maple and hickory are used, which cause sawing problems when poor quality bandsaw blades are used.

Teeth become chipped or lost and gullet cracking typically occurs which lead to bad sawing results, high downtime and short blade lifetimes. Using high-performance blades from Munkfors virtually eliminates these problems, to give cost-effective manufacturing with minimum production downtime.
